This is to confirm that

Andrew SOUNDY

contributed as a member of the Peer Review Group for **schizophrenia** to the development of World Health Organization's (WHO) Package of Interventions for Rehabilitation (PIR). The PIR will be a WHO resource containing information on evidence-based interventions for rehabilitation that will support member states with relevant information to facilitate the integration of rehabilitation in all service delivery platforms in countries, with a specific focus on the low- and middle resource context.

Members of Peer Review Group are responsible to review the health condition specific draft packages and provide feedback through an online survey, and thereafter, join web-conferences to discuss the potentially required revisions of the draft packages. Their input is critical for the development of the PIR. They work together in a multi-professional team representing all WHO regions and relevant professions.

WHO Rehabilitation Programme expresses its appreciation and thanks for the participation in the Peer Review Group.
