9 **What is ‘neo-craft’ work, and why it matters**  
10

11  
12  
13 *Abstract*  
14

15 Existing research has highlighted a global return into fashion of craft work in the new century. Within  
16 this context, the term ‘neo-craft’ work has been used to identify innovative craft work practices  
17 characterised by an aura of ‘coolness’, which promise a less alienated form of work; yet, the specific  
18 contours of this new form of work remain uncertain. In this article we develop a theoretical  
19 conceptualisation of neo-craft work. We define it as an emergent form of post-industrial craft work  
20 whereby work that was previously considered low-status, or performed by the working class, is: a)  
21 ‘resigned’ into status-producing activity through the integration of craft practices and values; and,  
22 b) conferred new meaningfulness as the outcome of a specific process of *discursive materiality*, by  
23 which the intra-action of discursive and material practices provides meaning to work activity. Neo-  
24 craft work, we contend, finds roots in the cultural milieu of hipster culture, where extenuating cultural  
25 negotiations around authenticity and ‘the particular’ constitute the baseline for a quest for social status  
26 based on practices of ‘marginal distinction’, and sets itself as an alternative not only to industrial work  
27 but, primarily, to the precarious, low-paid or otherwise unsatisfactory ‘bullshit jobs’ of the knowledge  
28 and creative economy.

50  
51  
52  
53 Existing research has highlighted a global return into fashion of craft work in the new century,  
54 described as a ‘third wave of craft’ (Jakob, 2013, p. 130). This has primarily concerned the creative  
55 and cultural industries, where craft work is understood as a semi- or non-market form of creative work  
56 and a countercultural practice set to ‘pragmatically resist’ capital accumulation (Luckman 2015;  
57  
58  
59  
60

1  
2  
3 Banks, 2014). Inspired by the work of Richard Sennett (2008), who conceives of craft as the epitome  
4 of ‘good work’, the resurgence of craft work has also been fostered in no small part by digital media.  
5  
6 On the one hand, digital platforms such as Etsy.com have allowed craft producers to sell their  
7  
8 artefacts online, enabling new ways for supply and demand to meet (Krugh, 2014). On the other hand,  
9  
10 social media have facilitated the gathering of global communities of practice around craft, who  
11  
12 engage in discussion and exchange advice (Naudin & Patel, 2019).  
13  
14  
15  
16  
17

18 However, this revival of craft work has extended beyond the creative industries to become a relevant  
19  
20 phenomenon in the market economy at large, particularly in the food and hospitality sector. A new  
21  
22 term has been coined to describe this trend: ‘neo-craft’ industries (Land, 2018; Bell, Mangia, Taylor,  
23  
24 & Toraldo, 2018). Epitomised by craft beer brewing (Fox Miller 2019, 2017; Wallace, 2019; Land,  
25  
26 Sutherland, & Taylor, 2018; Thurnell-Read, 2014), this term identifies those sectors whereby forms of  
27  
28 craft work – that is, ‘concerned with the skilful production of high-quality products’ – combine with  
29  
30 ‘innovation in both product and process’, pointing towards ‘a post-industrial imaginary’ (Land, 2018,  
31  
32 np). Within this context, the specific cultures and practices of work are of particular interest. ‘Neo-  
33  
34 craft’ work, as it has been labelled, is characterised by an aura of ‘coolness’ and promises ‘a less  
35  
36 alienated form of work’ (Land, 2018, np; Ocejo, 2017). Akin to creative work in the late 1990s and  
37  
38 early 2000s, neo-craft work is marked by a notion of passion, which makes it appealing particularly  
39  
40 for those who have found themselves excluded from, or have explicitly rejected, traditional pathways  
41  
42 to education and work (Ocejo, 2017). Yet, research on neo-craft work remains in its infancy, and its  
43  
44 specific contours remain uncertain. What are the distinctive features of neo-craft work? What  
45  
46 differentiates neo-craft work from other forms of craft or manual work? Why does neo-craft work  
47  
48 represent a ‘less alienated’ and innovative form of work?  
49  
50  
51  
52  
53

54 Contributing to the emergent body of research on craft in the new century, this article provides a  
55  
56 theoretical conceptualisation of neo-craft work. Using existing studies, we present neo-craft work as a  
57  
58 peculiar ‘new form of work’ of the 21st century. We define neo-craft work as an emergent form of  
59  
60 post-industrial craft work whereby work that was previously considered low-status, or performed by

1  
2  
3 the working class, is: a) ‘resignified’ into status-producing activity, through the integration of craft  
4 practices and values into forms of labour-intensive or manual production; and, b) conferred new  
5 meaningfulness as the outcome of a specific process of *discursive materiality*, in which discursive and  
6 material practices become inextricably connected, and their intra-action provides meaning to work  
7 activity. Neo-craft work, we contend, finds roots in the cultural milieu of hipster culture, whereby  
8 extenuating cultural negotiations around authenticity and ‘the particular’ (Smith Maguire, 2018)  
9 constitute the baseline of a quest for social status based on practices of ‘marginal distinction’. In neo-  
10 craft work, we show, the discourse around authenticity and ‘the particular’ provides meaning to the  
11 engagement with material practices, so that this acquires value in itself - and not conditional to its  
12 mastery - because it allows the body to set free from the usual organisational constraints (Harding,  
13 Gilmore, & Ford 2022), thus enabling the experience of embodied affectivity (Bell & Vachhani, 2020;  
14 Gherardi, Murgia, Bellè, Miele, & Carreri, 2019). This sets neo-craft work as an alternative not only  
15 to industrial work but, primarily, vis-a-vis the often precarious, low-paid or otherwise unsatisfactory  
16 ‘bullshit jobs’ (Graeber, 2019) of the knowledge and creative economy (Ross, 2009).

35 In the pages that follow, the article unfolds focusing first on the contextualisation of neo-craft work  
36 within the larger debate on the ‘future of work’, and then on the articulation of its definition, with  
37 specific attention to its relationship with traditional forms of craft work. Subsequently, we provide  
38 reason for its grounding in hipster culture and then outline in full the notion of discursive materiality,  
39 that we argue represents its distinctive feature. In the conclusion we critically reflect on the broader  
40 implications of our proposition, suggesting that neo-craft work does not represent another kind of  
41 craft as ‘return to the past’, but rather one based upon innovation that speaks directly about present  
42 and future societal trends.

### 54 **The bigger picture: contextualising neo-craft work as a ‘new form of work’**

55 A lively discussion on the ‘future of work’ has animated the academic and popular debate over the  
56 last decades, especially following the 2007-08 economic downturn. For the most part, this has been  
57 prompted by technological advancements in the digital sector: in a society transitioning out of the  
58  
59  
60

1  
2  
3 industrial era and into a highly fragmented scenario, fresh concerns have been voiced in particular  
4  
5 against the threat of job automation and the consequences of the suppression of human labour by  
6  
7 means of technology (e.g. Servoz, 2019; Neufeind, O'Reilly, & Renft, 2018; Thompson & Briken,  
8  
9 2017). Within this context, a variety of 'new forms of work' have been identified and critically  
10  
11 discussed, including algorithmic and platform labour (Vallas, 2019), collaborative work (Aroles,  
12  
13 Mitev, & de Vaujany, 2019), together with issues concerning quantification and surveillance of work  
14  
15 (Moore, 2017), and the introduction of robotics in industrial work (West, 2018), to name a few. Much  
16  
17 less attention has instead been posed onto the emergence of new forms of work that are not directly  
18  
19 related to technological advancement, and on their perceived meaningfulness vis-a-vis existing or  
20  
21 otherwise well-established ones.  
22  
23  
24  
25

26  
27 The affirmation of neoliberal policies aimed at flexibilising and globalising the labour market across  
28  
29 Western economies since the 1980s ignited a profound process of transformation of work cultures and  
30  
31 practices. Overall, this has been characterised by a diminishment of permanent employment and a  
32  
33 comprehensive push towards the 'entrepreneurialisation' of the workforce (Harvey, 2005; Kalleberg  
34  
35 & Vallas, 2018). This has particularly concerned the so-called knowledge economy, culminating at  
36  
37 the turn of the century in the vision of an upcoming 'creative class' of workers who would thrive on  
38  
39 individual talent and enjoy a 'cool' lifestyle (Florida, 2002). Contextually, the rapid diffusion of  
40  
41 digital technologies and their integration in work practices and organisation facilitated the  
42  
43 proliferation of 'contingent' and 'nonstandard' forms of employment, particularly freelance work,  
44  
45 which have affirmed as a 'new standard' of work (Cappelli & Keller, 2013; Gandini, 2016). These  
46  
47 'cool' creative jobs, however, largely materialised in the form of precarious, low-paid work,  
48  
49 characterised by long hours and scarce remuneration (Ross, 2009; McRobbie, 2016).  
50  
51  
52  
53

54 Somewhat paradoxically, in the middle of these advancements craft work experienced a resurgence.  
55  
56 Following the 2007-8 economic downturn, craft has enjoyed a new 'moment in the sun' (Luckman &  
57  
58 Thomas, 2018, p. 1), described as a 'third wave of craft' (Jakob, 2013, p. 130). Craft work affirmed as  
59  
60 a potential way out of the recession, enabling a renewed push towards small entrepreneurship while a

1  
2  
3 new set of actors, particularly startup investors, entered the craft scene, anchoring the revival of craft  
4 firmly in the camp of the neoliberal economy (Luckman & Thomas, 2018; Adamson, 2013). The  
5 popularity of social media and online platforms such as Etsy.com also contributed in no small part to  
6 this resurgence, enabling different stakeholders and communities of practice around craft to get in  
7 contact irrespective of their geographic location, opening up new markets and spaces of action  
8  
9  
10  
11  
12  
13 (Naudin & Patel, 2019; Luckman, 2015; Krugh, 2014).  
14  
15  
16

17  
18 Interestingly, however, this revival of craft has not solely concerned work that has been traditionally  
19 classified as craft. Particularly within some productive sectors of the market economy that do not  
20 necessarily belong to the 'native' contexts of craft (Gibson, 2016), such as the food and hospitality  
21 industries, existing research has noted the emergence and popularisation of craft-based forms of  
22 production and an increased interest in small-scale, artisanally-produced goods (cfr. Pedeliento,  
23 Andreini, & Dalli, 2020). This has been defined by Currid-Halkett (2017) as a new form of  
24 aspirational consumption, characterised by 'conspicuous production'. It is 'the production, rather than  
25 the consumption', Currid-Halkett (2017, p. 117) argues, that 'becomes the key conspicuous signal'  
26 which confers value to the individual consumption practice as a kind of aspirational move based on  
27 cultural preference (Currid-Halkett, 2017, p. 117).  
28  
29  
30  
31  
32  
33  
34  
35  
36  
37  
38  
39  
40

41 The term 'neo-craft' industries (Land, 2018) has been coined to grasp the artisanal turn of the market  
42 economy. This identifies those sectors whereby the recuperation of pre-industrial, small-scale or  
43 otherwise abandoned forms of production, aptly repurposed to the modern economy, has become  
44 fashionable, tapping into a consumer niche. Neo-craft industries are quintessentially epitomised by  
45 craft beer brewing (Fox Miller 2019, 2017; Wallace, 2019; Land et al., 2018; Thurnell-Read, 2014),  
46 which has grown from a semi-hobbyist activity to a lively entrepreneurial and cultural scene  
47 punctuated by global actors, and represents today an important subset of the beer economy worldwide  
48  
49  
50  
51  
52  
53  
54  
55  
56 (Kroezen & Heugens, 2019; Land et al., 2018; Land, 2018).  
57  
58  
59  
60

1  
2  
3 Yet, besides craft beer brewing, the cultures and practices of work within the neo-craft context are of  
4 particular interest. Neo-craft work, as it has been labelled, is marked by an aura of ‘coolness’ and  
5 promises ‘a less alienated form of work’ (Land, 2018, p. np) that is deemed to subvert ‘the usual  
6 aspirations of social mobility, with middle-class, college educated kids rejecting office work and the  
7 professions in favour of butchering, barbering or bartending – all traditionally working-class jobs’  
8 (Land, 2018, np; Ocejo, 2017). Like creative work in the late 1990s and early 2000s, neo-craft work is  
9 characterised by a notion of passion, which makes it particularly appealing for those who have found  
10 themselves excluded from, or have explicitly rejected, traditional pathways to education and work  
11 (Ocejo, 2017). Yet, we still know quite little about its distinctive features, what differentiates it from  
12 other forms of craft (and non-craft) practices, and how we can make sense of its rise in the present day  
13 and age. This article aims at filling this gap.

### 29 **Neo-craft work: a primer**

30 Landmark reference in the emergent scholarship on neo-craft work is Ocejo (2017). Through in-depth  
31 ethnographic research within 4 neo-craft industries in the US - ‘mixologist’ bartending, whole animal  
32 butchering, barbering, and gin distilling - Ocejo recounts how a variety of educated and culturally-  
33 savvy young workers have turned to traditionally working-class activity in search of meaningfulness  
34 and ‘good’ work, transforming once-undesirable jobs into ‘elite’ occupations and creating new  
35 cultural hierarchies within and around them. The food and hospitality sector - particularly, as said,  
36 craft beer brewing - is considered to be the ‘native’ context of neo-craft work (Land, 2018). Yet, as  
37 Ocejo’s work demonstrates, a variety of activities could potentially fit this framework, including other  
38 craft occupations - such as ceramicist or small jewellery producer - as well as jobs commonly  
39 performed by the working-class. It seems necessary, in other words, to develop a more accurate  
40 understanding of how these cultural hierarchies have come to be, and how they have contributed to  
41 what may be seen as a *resignification* of work activity that does not necessarily belong to the domain  
42 of craft, but where craft practices and values have become commonplace and the source of original  
43 forms of social recognition.  
44

56  
57  
58  
59  
60

1  
2  
3 We define neo-craft work as an emergent form of post-industrial craft work whereby work that was  
4 previously considered low-status, or performed by the working class, is: a) ‘resignified’ into status-  
5 producing activity, through the integration of craft practices and values into forms of labour-intensive  
6 or manual production; and, b) conferred new meaningfulness as the outcome of a specific process of  
7 *discursive materiality*, in which discursive and material practices become inextricably connected, and  
8 their intra-action provides meaning to work activity. This new breed of craft work can typically be  
9 found in the gentrified urban areas of Western global cities. Here, as Gibson (2016, p. 6) points out,  
10 new craft and maker scenes are ‘conferred a degree of industrial or working-class authenticity’, that is  
11 reflective of ‘a new phase of ‘cultural capitalism’ in which symbolic meaning and sign values infuse  
12 commodity production’. Research suggests that 3 main subjects typically participate in neo-craft  
13 work, frequently overlapping with one another in their capacity: a) the producers, who materially  
14 work on the production process; b) the entrepreneurs or business owners, and c) the salaried workers,  
15 particularly in the hospitality sector, who participate in these scenes not just for the mere necessity to  
16 work, but to fulfil their ‘passion’ and as a means for social recognition (Ocejo, 2017; Land, 2018; Bell  
17 et al., 2018).

18  
19  
20  
21  
22  
23  
24  
25  
26  
27  
28  
29  
30  
31  
32  
33  
34  
35  
36  
37 Empirical accounts of neo-craft work remain sparse; existing works, however, portray a contradictory  
38 picture. Fox Miller (2019), for instance, describes craft beer workers in Oregon as ‘glorified janitors’  
39 and ‘glamorised’ workers who have assumed celebrity-like status because of their ‘cool’ job, but that  
40 continue to experience significantly bad working conditions. Similarly, Wallace (2019) highlights  
41 how craft beer brewing in London is increasingly connoted with status-achieving features but  
42 continues to be marked by acute social inequality, and suffers from extensive precarity. Land et al.  
43 (2018) also underline that craft beer brewing in the UK is prone to forms of gender inequality, noting  
44 that, within this context, an emphasis on authenticity and retraditionalization is enmeshed within a  
45 comprehensively masculine culture of work. Other studies also underline that social media  
46 significantly contributed to the ‘coolness’ of craft and artisanal work (Bell et al., 2018), constituting  
47 an important milieu for neo-craft producers to meet their consumer base (Eckhardt & Bardhi, 2019;  
48 Currid-Halkett, 2017).

1  
2  
3  
4  
5 More empirical research is certainly required to dig more in depth into this new kind of craft work and  
6  
7 the forms of organisation characterising it. Yet, to further complicate things, the existence of neo-craft  
8  
9 work is difficult to account for in official statistics, as it remains somewhat hidden among established  
10  
11 craft occupations and new small entrepreneurial activities, and no existing data source is able to  
12  
13 account for the exact size of this workforce. Furthermore, and perhaps most importantly, its ‘neo-’  
14  
15 status rests on unclear theoretical boundaries; the distinctive features of this kind of craft work have  
16  
17 so far been only sketched out, as they emerge inductively from rich but nonetheless context-specific  
18  
19 ethnographic research. Similar to creative work in the late 1990s, the alleged quality of neo-craft jobs  
20  
21 as ‘less alienated’ forms of work remains untested, and coated with a somewhat mythological status  
22  
23 that needs to be put under question. As Kroezen, Ravasi, Sasaki, Żebrowska, and Suddaby (2021)  
24  
25 point out, there is a demand for research that addresses how ‘creative’ and ‘pure’ forms of craft relate  
26  
27 with more technical and industrialised ones, and the extent to which the association with a ‘craft  
28  
29 imaginary’ (Bell, Dacin, & Toraldo, 2021) actually confers more meaningfulness to certain forms of  
30  
31 work. Neo-craft work seems to be an ideal case to observe in this endeavour.  
32  
33  
34  
35  
36

### 37 **Traditional craft work vs neo-craft work**

38  
39 As said, the existing scholarship identifies craft beer brewing and, more generally, the food and  
40  
41 hospitality sector, as quintessential examples of neo-craft work. However, the production of food and  
42  
43 drinks has generally not been considered to be craft work in its traditional meaning, nor workers  
44  
45 involved in their production have been traditionally considered craftspeople - with the exception of  
46  
47 specific contexts, such as France, where the word *artisan* historically refers to an ample range of  
48  
49 occupations including, among other things, baking. Furthermore, the boundaries of what is  
50  
51 conventionally considered ‘craft work’ have been difficult to draw from a strictly academic point of  
52  
53 view, as craft research has historically displayed, ‘if one were being generous, a plurality of meanings;  
54  
55 less charitably, the word [craft] has been the epitome of confusion’ (Dormer, 1997). However, a  
56  
57 clearer picture emerges if we adopt an ‘institutionalist’ perspective, looking at the boundaries set by  
58  
59 the professional bodies representing craft producers.  
60

1  
2  
3  
4  
5 As of today, the UK Crafts Council classifies its more than 800 members in 29 categories, according  
6  
7 to the final goods they produce or the production process; these range from bookbinders to 3D makers  
8  
9 (UK Craft Council, 2022). The UK Heritage Craft Association goes even further, enlisting as many as  
10  
11 244 categories of craft (Heritage Crafts, 2017). The American Craft Council does not offer a similarly  
12  
13 specific categorization, but the vocabulary used and the people and businesses showcased is akin to  
14  
15 the other two here mentioned (American Craft Council, 2022), as well as for the World Crafts Council  
16  
17 Europe (2022), which enlists craft associations from all around Europe. The craft work that these  
18  
19 bodies chiefly preserve and promote is one that skillfully manipulates raw materials to produce a final  
20  
21 durable object with artistic quality. This resonates with the definition provided by Howard Risatti  
22  
23 (2009) in *A Theory of Crafts*, which is prompted by the same recognition of a general ambiguity of the  
24  
25 term ‘craft’ in the literature. Recognizing that craft work is commonly associated with a range of  
26  
27 materials (ceramics, glass, fibres, metals, wood, etc.) as well as with specific technical and working  
28  
29 procedures (weaving, quilting, turning, smithing, etc.), Risatti adopts a definition of craft work as a  
30  
31 working process aimed at producing objects with a practical physical function (Risatti, 2009). Risatti  
32  
33 does not mention explicitly that these objects must be durable, but from the premises this is implicit.  
34  
35 Clearly, none of the 4 jobs included in the seminal book by Ocejo (bartenders, barbers, butchers and  
36  
37 gin distillers) could be reasonably defined as ‘craft’ according to this definition, nor to the definitions  
38  
39 provided by traditionally-established craft associations. This ambiguity also extends to craft beer  
40  
41 brewing, which has often remained excluded by the circle of proper craft occupations (Brown, 2020)  
42  
43 albeit recent research (e.g. Kroezen & Heugens 2019, 2012; Land et al., 2018) has somewhat  
44  
45 ‘naturally’ included this among the new craft and making activities. Overall, an evident research  
46  
47 puzzle emerges here, hindering the possibility to pursue a systematic investigation of neo-craft work,  
48  
49 its practices and organisational forms. How can neo-craft work be epitomised by sectors that are  
50  
51 extraneous to what is generally understood as craft work?  
52  
53  
54  
55  
56  
57

58 Building on the ‘configurations’ of craft devised by Kroezen et al. (2021), we see neo-craft work as an  
59  
60 emergent form of ‘post-industrial’ craft work that bypasses the dichotomy between traditional and

1  
2  
3 industrial craft and, in so doing, devises an original blend between ‘creative’ craft - where craft is  
4  
5 “associated with a pursuit of creativity in making and fueled by social movements promoting  
6  
7 individual freedom and expression” (Kroezen et al. 2021, p. 521) - and ‘pure’ craft - where craft  
8  
9 represents “the radical prioritisation of human skills at the expense of all that is considered  
10  
11 mechanical” (Kroezen et al., 2021, p. 519). Like other forms of craft work, neo-craft work maintains  
12  
13 an ontologically alternative stance to industrial production, stressing how manual work - once free  
14  
15 from the alienation caused by machines - can be the source of “the craft satisfaction that arises from  
16  
17 conscious and purposeful mastery of the labour process” (Braverman 1974, p. 7). The mastery of  
18  
19 skills, an all-rounded understanding of the making process, and dedication to one’s work, are integral  
20  
21 to neo-craft occupations (Ocejo, 2017). Yet, as a post-industrial form of craft work, neo-craft work  
22  
23 extends its scope of action to the mastery of specific types of innovation and knowledge, expressed in  
24  
25 cultural negotiations around authenticity and ‘the particular’ (more on this later). In so doing, neo-  
26  
27 craft work is not necessarily antithetical to technological advancement; on the contrary, it is principled  
28  
29 on an opposition to the meaninglessness of other forms of employment and, in particular, sets itself as  
30  
31 alternative to the low-paid and precarious forms of knowledge and creative work in the neoliberal  
32  
33 economy. The making of something through manual or otherwise labour-intensive but ‘authentic’  
34  
35 practice is preferable, for participants in neo-craft industries, to the engagement in a labour market -  
36  
37 that of the knowledge and creative economy - which is comprehensively believed to be unable to  
38  
39 valorize one’s skill, characterised by marked precariousness and dissatisfaction (again, more on this  
40  
41 later). Conceived as such, neo-craft work allows workers to fruitfully marry cultural exploration with  
42  
43 the pursuit of personal interests and a strive for authenticity and self-affirmation, in the context of a  
44  
45 comprehensively romantic and nostalgic narration that glorifies the past and uses it as a future-  
46  
47 oriented source of inspiration. This finds roots in the context of a very peculiar social phenomenon:  
48  
49 hipster culture.  
50  
51  
52  
53  
54  
55

### 56 **From hipster culture to neo-craft work: a question of ‘marginal distinction’**

57 Historically associated with an obsession for trendiness and being in-the-know about fashion and  
58  
59 lifestyle (Michael, 2015; Schiermer, 2014), and largely considered a byproduct of the indie subculture  
60

1  
2  
3 (Cronin, McCarthy, & Collins, 2014; Arsel & Thompson, 2011), hipster culture has affirmed in the  
4 first decades of the 21st century as a highly heterogeneous social phenomenon, typical (albeit not  
5 solely) of the hyper-gentrified, post-industrial neighbourhoods of Western global cities (Maly &  
6 Varis, 2016; Arvidsson, 2020). Theorisations of hipster culture in academic research exist mainly in  
7 the context of consumer research and cultural studies. These largely agree on the following, ideal-  
8 typical description: ‘Hipsters are young, white and middle class, typically between 20 and 35 years  
9 old (who) contribute to the ‘gentrification’ of former ‘popular’, working-class, ethnic or ‘exotic’  
10 neighbourhoods in the big Western cities’ (Schiermer, 2014, p.170). They ‘generally vote to the left,  
11 typically study at the humanities or work in the ‘creative industry’ or in cafes or bars or music or  
12 fashion stores’ (Schiermer, 2014, p.170). Accordingly, hipsters are regarded to be ‘voracious  
13 consumers’ who strive to keep up with the latest trends and are ‘deeply involved in the cultural field  
14 of the city they live in’ (Michael, 2015, p. 169).

15  
16  
17

19  
20  
21  
22  
23  
24  
25  
26  
27  
28  
29  
30 While this account looks credible, at least from a commonsensical standpoint, it must be noted that it  
31 relies more on theoretical assumptions than on empirical grounding. In fact, contrary to other social  
32 groups, participants in hipster culture tend to keep self-identification at bay. As Maly and Varis (2016,  
33 p. 638) note, “the rejection of the label ‘hipster’ as a category of self-identification seems to be part  
34 and parcel of the hipster identity discourse”. Similarly, Cronin et al. (2014, p. 8) underline that  
35 ‘(s)ignificant complications arise (...) when studying the hipster subgroup on the grounds that most  
36 members of this identity category shun the very label used to define them’. Put differently, the  
37 question of who should be considered a hipster remains a kind of epistemological conundrum, as a  
38 result of the absence of an explicit claim of ‘hipster subjectivity’. For the purposes of this article we  
39 follow Maly and Varis (2016), who describe hipster culture as a highly heterogeneous, translocal,  
40 polycentric and layered social phenomenon, participated by a variety of subjects roughly belonging to  
41 the same generational cohort – so-called Millennials – and constituted of practices marked by a  
42 dimension of normativity, which combine ‘very local’ tastes and attitudes with global consumption  
43 practices and cultures (Maly & Varis, 2016, p. 644). Accordingly, elaborating from Gerosa (2021), we  
44 define hipster culture as a constellation of diverse (micro-) social practices underpinned by a  
45  
46  
47  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 distinguishing, shared discursive imaginary and aesthetic regime, characterised by: a) the hegemonic  
4 normativity of authenticity as a value logic, and b) the (to some degree, consequent) popularisation of  
5 a logic of taste based on the social recognition of ‘the particular’ and its extenuating cultural  
6 negotiation.  
7  
8  
9  
10

11  
12  
13 Virtually all research agrees on the centrality of authenticity in hipster culture. Something ‘authentic’  
14 carries remarkable social value in hipster circles, as it conveys experiential meaning and constitutes a  
15 key determinant in the expression of oneself. It has been noted that authenticity in hipster culture  
16 mediates a tension between individuality and imitation (Michael, 2015). Scheirmer (2014) for  
17 instance, points out that hipsters usually refrain from imitation and reify individuality, while they  
18 thrive on being ‘quirky’ and displaying knowledge of ‘unique’ trends. Yet, as Michael (2015) also  
19 suggests, hipsters do not reify trendiness as such, but rather the narrative that is attached to it – that is,  
20 the discourse around the perceived authenticity of a practice or product. This extends onto the  
21 practices of sociality and consumption peculiar to these scenes (Gerosa, 2021; Maly & Varis, 2016).  
22 The normative, culturally hegemonic role of authenticity in hipster culture is expressed through  
23 practices that are exemplary of a logic of taste based on the social recognition of ‘the particular’, and  
24 in its extenuating cultural negotiation in given social contexts. This is particularly epitomised by an  
25 obsessive attention towards production features in consumer goods, which is reflected - and here we  
26 are - in the popularity of craft, artisanal, natural or organic products among this social group (Ocejo,  
27 2017; Currid-Halkett, 2017).  
28  
29

41  
42  
43  
44  
45  
46  
47

48 We understand these cultural negotiations as practices of ‘marginal distinction’. These concern the  
49 valorisation of the display of one’s capacity to grasp the ‘marginal’ differences that characterise  
50 certain products and tastes. The adjective ‘marginal’ is here intended in two different and  
51 complementary nuances. On the one hand, it concerns the social value of newness, both in absolute  
52 terms and in relation to the mainstream. In this sense, it echoes the economics notion of marginal  
53 utility, which contends that the utility (i.e., the satisfaction) of consuming a product or service  
54 decreases as the number of additional units consumed increases (Kauder, 2015). In existing research  
55  
56  
57  
58  
59  
60

1  
2  
3 and in popular discourse, this is represented through the expression ‘before it was cool’, which  
4  
5 highlights how participants in hipster culture value the newness of a fashion trend, a food habit, or a  
6  
7 technological device (Maly & Varis, 2016). Yet, the more a new taste or trend becomes incrementally  
8  
9 popular in the mainstream consumer arena, the less it carries social gain in hipster circles. A new  
10  
11 consumption practice, taste, or trend is considered socially valuable in hipster culture if it is  
12  
13 recognized as new and ‘marginally’ uncommon: its recognition brings social gain. In turn, its value  
14  
15 incrementally decreases if a growing number of consumers – the mainstream – takes an interest in this  
16  
17 same practice, taste or trend, leading to the consumption practice becoming common and thus igniting  
18  
19 the search for a new marginality.  
20  
21  
22  
23

24 At the same time, ‘marginal’ also refers to the detection of ‘the particular’ (Smith Maguire, 2018) in a  
25  
26 given consumption practice, taste, or trend. This is intended as the apparently indiscernible, discursive  
27  
28 and/or material differences that set similar products apart. In hipster culture, this commonly takes  
29  
30 place - and here we are again - on the basis of production features. Labels such as ‘craft’, ‘artisanal’,  
31  
32 ‘organic’, or ‘natural’, become value-conferring precisely because they allow to express such  
33  
34 ‘marginal’ and apparently indiscernible differences between categories of products (and inside these  
35  
36 categories too) – which recognition, again, is status-producing. For instance, a preference for craft  
37  
38 beer as opposed to its mainstream counterpart allows participants in hipster culture to present  
39  
40 themselves as refined consumers of a product that is beer, but *a tiny bit different* (cfr. Pozner,  
41  
42 DeSoucey, Verhaal, & Sikavica, 2022). Similarly, their appreciation of organic coffee allows them to  
43  
44 showcase their knowledge about a product that is coffee, but *a tiny bit different*. While an attention to  
45  
46 production features is not necessarily new as a consumer preference, in hipster culture it becomes a  
47  
48 conspicuous trait, as Currid-Halkett (2017) argues, and a device to express cultural competence. At  
49  
50 the same time, this kind of cultural competence is used as a means to social status acquisition, which  
51  
52 results from the capacity to grasp the actually existing, or otherwise perceived, ‘marginal’ differences  
53  
54 between apparently identical consumer goods.  
55  
56  
57  
58  
59  
60

1  
2  
3 Neo-craft work emerges within this cultural milieu. Here, craft production and products as discussed  
4 do not solely represent a market response to a consumer trend, but constitute ‘actually authentic’  
5 forms of production founded upon ‘particular’ techniques or materials, that are ‘reconverted’ to the  
6 present-day consumer economy (Scott, 2017). This constitutes the aforementioned ‘resignification’  
7 process, which is characterised by the integration of craft practices and values into forms of labour-  
8 intensive, manual production. The engagement in an eminently cultural - and therefore,  
9 quintessentially post-industrial - labour that extends the craft allure onto the subjects and practices  
10 involved in these jobs, providing them with social recognition. A vignette in Ocejó’s (2017) work  
11 perfectly describes this process, when he presents a mixologist bartender who explains that requesting  
12 a bartender to ‘do what they want’ with one’s cocktail order represents a form of social reward and a  
13 nurturing of their creative dispositions. Here, a mixologist behaves like a creative worker, in that the  
14 successful understanding of the marginal preferences of the consumer - expressed in the production of  
15 a cocktail that matches these preferences - represents a means of creative expression. This same  
16 exchange, in turn, has status acquisition potential: mixologist bartenders are bartenders, but *a tiny bit*  
17 *different* from ordinary ones. As participants in what may primarily be seen as a cultural scene, neo-  
18 craft workers thus produce a ‘culturalization’ of their working-class or otherwise manual work by way  
19 of this resignification, anchoring it in a ‘craft imaginary’ (Bell et al., 2021) and transforming it into a  
20 creative labour of sorts.  
21  
22  
23  
24  
25  
26  
27  
28  
29  
30  
31  
32  
33  
34  
35  
36  
37  
38  
39  
40  
41  
42

43 This, as said, finds roots in the cultural negotiations that are peculiar to hipster culture. Obviously, we  
44 do not argue that all neo-craft workers are hipsters, nor that all hipsters are neo-craft workers or that  
45 hipsters solely consume neo-craft products and engage in consumption practices principled upon  
46 marginal distinction. As research on hipsters notably underlines, their consumer practices are  
47 diversified and heterogeneous; hipsters play with taste hierarchies in ways that do not always comply  
48 with a coherent cultural construction, mixing highbrow and lowbrow in clever manners, and using  
49 irony as a cultural marker (le Grand, 2020). It is for this reason that hipster culture has been taken  
50 somewhat less seriously than deserved, both in academic research and in the popular debate, often  
51 dismissed as a fad or a joke. Yet, for how incoherent, hipster culture has been argued to be exemplary  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 of emerging ‘modes of distinction’ (Friedman, Savage, Hanquinet, & Miles, 2015) that lead to new  
4 forms of social status acquisition (Eckhardt & Bardhi, 2019): the affirmation of neo-craft work, we  
5 contend, should be seen as a byproduct of this cultural and social phenomenon.  
6  
7  
8  
9

10  
11 Within this context, craft, quoting Bell et al. (2021), ‘responds to the desire for authenticity through  
12 retrospective symbolic and discursive construction’ (p. 7) and, in so doing, promotes ‘a ‘forward-  
13 looking consciousness [that] does not ignore past experiences (...) but it uses its experience in order to  
14 transform it’ - in this case, into meaningful work (p. 13). This is why, as a form of ‘cultural labour  
15 with hands’ with entrepreneurial and reputational potential, as noted by Ocejo (2017) neo-craft work  
16 becomes appealing for many young workers of a middle class background, representing not only ‘the  
17 only viable alternative to the drudgery of factory labour’ (Arvidsson, 2020, p. 21) but, as said, a  
18 credible alternative to the status-inducing, but also precarious, low-paid ‘bullshit jobs’ (Graeber,  
19 2019) of the neoliberal knowledge and creative economy (Ross, 2009). See for instance how this craft  
20 beer worker, an interviewee in Fox-Miller (2019, p. 84), describes her shift to neo-craft work:  
21  
22  
23  
24  
25  
26  
27  
28  
29  
30  
31  
32  
33  
34

35 *“I spent my days in a cubicle staring out the window thinking about all the different things I could be*  
36 *doing with my time... [With brewing] there’s this sense of autonomy, like I have agency over*  
37 *everything I’m doing. This is my choice. I am creating a life-cycle and I’m creating a living product...*  
38 *When you are behind the computer, you are so disconnected from the end product. And there might*  
39 *not even be a product that you are working towards. But [beer] is a discernible product that I can*  
40 *consume and use and share with people.”*  
41  
42  
43  
44  
45  
46  
47  
48  
49

50 In sum, here we extend Ocejo’s argument (2017) and contend that neo-craft work represents a new  
51 kind of ‘meaningful work’ (Schwartz, 1982; Laaser & Karlsson, 2022) through which workers  
52 experience that unity between worker, production process and object that is historically associated  
53 with the ideal of unalienated ‘good work’ in craft work (Sennett, 2008). This meaningfulness -  
54 interpreted as the combination of autonomy, dignity and reputation (Laaser & Karlsson, 2022) - is  
55  
56  
57  
58  
59  
60

1  
2  
3 determined by a peculiar combination of the discursive and the material, that we argue is the  
4  
5 distinctive trait of this new form of work.  
6  
7  
8

### 9 **The discursive materiality of neo-craft work**

10  
11  
12 Discussing craft beer, Brown (2020) identifies the low skill level required to enter the industry as the  
13  
14 main culprit which, in his view, disqualifies craft beer from being considered a 'true craft'. The  
15  
16 solution, for him, is to make the craft beer brewer a professional title, emulating the middle-age guild  
17  
18 system. In contrast, Langlands (2017) considers craft beer as a marketing ploy that misuses its  
19  
20 authentic allure for commercial purposes, and suggests that in order to recover the true meaning of  
21  
22 craft, we must instead resort to 'craft', i.e., skillfulness and wisdom. Despite standing on opposite  
23  
24 grounds, both these authors – writing for a generalist audience – ultimately agree that 'true craft'  
25  
26 equates with skill, and there is a distinction between 'new crafts', like beer brewing, and recognized  
27  
28 crafts.  
29  
30

31  
32  
33 In 'Masters of Craft', Ocejo (2017) undertakes his ethnography precisely with the aim of  
34  
35 understanding why young people with high-level education are enthusiastically choosing jobs that are  
36  
37 traditionally considered as low-skilled. The answer he finds is that, for them, these jobs turn out to be  
38  
39 more personally rewarding than any corporate job for which they might have acquired educational or  
40  
41 professional skills. Ocejo fully acknowledges these activities with the status of 'crafts', but also  
42  
43 argues that there is a tension between them and their traditional counterparts: the jobs he discusses are  
44  
45 creating a new industry rather than updating or substituting other forms of craft work. After having  
46  
47 discussed the relationship between traditional and neo-craft work and conceptualised the cultural  
48  
49 milieu wherein the latter emerges, for our argumentation to be fully outlined we now turn to argue  
50  
51 that what is distinctive of neo-craft work is a peculiar combination of the discursive and the material,  
52  
53 that we call 'discursive materiality'.  
54  
55

56  
57  
58 As said, the common denominator of craft work as traditionally intended has long been deemed to be  
59  
60 the skillful production of durable objects, being tools or goods, with raw materials such as wood,

1  
2  
3 metal (precious or otherwise), pottery, woven, glass, etc. Success – be it commercial or in terms of  
4 personal satisfaction – depends upon the production of high-quality, refined objects. To achieve this  
5 goal, the artisan needs to accumulate significant experience and mastery in a specific production  
6 technique. This focus on skillfulness, durable objects and quality represents the baseline of the  
7 fundamental connection between craft, art and design, that persists (Shiner, 2012) even after the  
8 separation between ‘fine arts’ and ‘craft arts’ (Adamson, 2013) brought to a widespread degradation  
9 of its status. Thus, in the context of craft work as traditionally conceived the mastery requires  
10 engagement with cultural and symbolic discursive practices which primarily relate to the artisan’s  
11 proficiency in the engagement with matter, that is, to create products of extraordinary quality.  
12  
13  
14  
15  
16  
17  
18  
19  
20  
21  
22  
23

24 On the other hand, if we accept the conceptualisation of neo-craft work just outlined, it appears that  
25 neo-craft work primarily rests upon an engagement with the previously-illustrated cultural and  
26 symbolic discourses of marginal distinction in the performance of the working act. To put it in  
27 simpler, comparative terms: from the perspective of craft work as traditionally intended, to master the  
28 ‘craft’ of a high-quality cocktail or beer requires less expertise in manual manipulation than to master  
29 the craft of a finely decorated ceramic vase, jewel or blown glass sculpture. Thus, jobs that iconically  
30 represent neo-craft work are usually not considered to be craft work because they require a lower  
31 degree of manual engagement, and produce goods for immediate consumption that – apart from  
32 exceptional circumstances – do not possess the artistic and design qualities associated with durable  
33 craft objects. However, this does not explain why neo-craft work is now so fashionable and tightly  
34 associated with the notion, albeit in a new form, of craft. The low entry-level skill requirements may  
35 make neo-craft work an escape route for middle-class, highly-educated individuals from the ‘bad jobs’  
36 of the knowledge economy. But why does this kind of manual work remain attractive in the first  
37 place? Why do some want to become ‘craftspeople’, albeit in a different way? Put differently, if we  
38 have accounted for the ‘neo-’ prefix in the neo-craft definition, it still remains to make sense of and  
39 justify its ‘craft’ component.

1  
2  
3 In order to accomplish this task, a good starting point is to critically re-examine the renowned ‘The  
4 craftsman’ by Richard Sennett (2008). In the opening pages of the book, Sennett argues that  
5  
6 ‘craftsmanship is poorly understood when it is equated only with the manual skill of the carpenter’s  
7  
8 sort’ (Sennett, 2008, p. 20), which is a much more groundbreaking statement than what could appear  
9  
10 at first. Instead, he advances a definition of craft work that revolves around three pillars: engagement  
11  
12 and dedication to ‘good work’ for its own sake; co-presence of ‘hand and head’; and, presence of a  
13  
14 skill developed to a high level (Sennett, 2008, p. 20). But which skills? Certainly not only manual  
15  
16 ones, given the premise. Indeed, Sennett provides a very illustrative sample of who qualifies as  
17  
18 ‘craftspeople’ according to his definition: carpenters, lab technicians, conductors, even Linux  
19  
20 programmers. This is an extremely broad set of professions in which the manual component of work  
21  
22 largely fades away, becoming peripheral if not invisible. To describe his ideal of craftspeople, Sennett  
23  
24 recovers the archaic Greek ideal of the *demioergos*, who focuses on achieving quality and doing good  
25  
26 work for social recognition (Sennett, 2008, pp. 21-27). While resorting to ancient Greece, Sennett  
27  
28 actually proposes a very (post-)modern definition of craftsmanship that well captures the meaning of  
29  
30 craft in neo-craft work: neo-craft workers aspire to be *demioergoi*. However, this does not mean that  
31  
32 the craft in neo-craft work acquires a purely metaphorical dimension, becoming detached from the  
33  
34 necessity of manual work. Manual work still possesses a fundamental value in neo-craft work, only a  
35  
36 different one: it acquires value by means of an intra-agential process where the materiality of the  
37  
38 making combines with the discursive dimension (cultural negotiations around authenticity and ‘the  
39  
40 particular’), which gets tangibly incorporated in the aura of the material object serving as a semiotic  
41  
42 vehicle (Harold, 2020). It is through the combination of these dimensions that the neo-craft artisan  
43  
44 embodies, affects and perceives the achievement of ‘good work’.  
45  
46  
47  
48  
49  
50

51 Thus, informed by the performative and the affective turn in organisational studies (Bell & Vachhani,  
52  
53 2020; Gherardi, 2016; Gherardi et al., 2019; Harding et al., 2022) based on agential realism (Barad,  
54  
55 2007), we argue that neo-craft work as a productive process represents the outcome of a specific form  
56  
57 of *discursive materiality*, that is, one in which discursive and material practices become inextricably  
58  
59 connected, and their intra-action provides meaning to work activity. By applying a performative  
60

1  
2  
3 approach we interpret the working act as a situated practice (Gherardi, 2016) constituted by the intra-  
4 action (Barad, 2007) between the body of the artisan, the raw materials, the tools and the discursive  
5 practices altogether. By adding the lenses of the affective turn to this conceptualization we consider  
6 affect (in the Spinozian meaning of the ability to bodily affect and be affected) to lie in and emerge  
7 from the intra-action of embodied subjects, objects, and discourses (Gherardi et al., 2019). In line with  
8 this interpretation, the artisan should be considered as the ensemble of agentive matter and embodied  
9 discursive practices (Harding et al., 2022). The concept of discursive materiality allows enlightening  
10 the entanglement between discursive and material practices in neo-craft work, stressing how  
11 ‘materiality is in itself performed and knowing emerges from the interactions between material  
12 phenomena, the material arrangements for knowing about these phenomena, and epistemic practices’  
13 (Gherardi et al., 2019, p. 296). To read neo-craft work in this entanglement requires in other words to,  
14 on the one hand, analyse the nature of the discursive practices embodied by the artisan’s body at the  
15 moment of the working act, and on the other hand to understand the meaning and function of the  
16 relationship between the body of the artisan and the matter in the manual working act.

32  
33  
34

35 An example of this entanglement between the discursive and the material is offered by Gabriele, a  
36 Lithuanian, Copenhagen-based upcycle bag maker in her late 20s. Describing her neo-craft enterprise,  
37 called Bagabù, she explains that:  
38  
39  
40  
41  
42

43 *“Bagabù journey started back in Italy in 2015. At the time I was living there and I was looking for a*  
44 *job, but without much success. Meanwhile, to keep myself occupied, I started learning how to sew,*  
45 *and decided to try to sew some simple tote bags. One weekend, while strolling through the monthly*  
46 *vintage market in the main city square, I spotted 5 old, big leather jackets that the seller was almost*  
47 *giving away for free as they were waaay out of fashion and also a little bit damaged. At that point the*  
48 *idea kicked in: why not make leather bags by re-using the jackets? Here the whole journey started of*  
49

3 *experimenting, learning, finding cool and smart ways of upcycling leftover materials into high*  
4 *quality, handmade, and pretty unique products.”<sup>1</sup>*  
5  
6  
7  
8

9 Gabriele has a visual communication and sustainability degree. In her work, the intra-active  
10 relationship between her embodied discursive practices, the meanings associated to the manual  
11 process of production and the cultural process of marginal distinction, the raw materials such as  
12 leftovers, the direct affective relationship with the final product and consumers, all contribute to her  
13 identity as a neo-craft worker. See for example the passage below, in the same interview:  
14  
15  
16  
17  
18  
19  
20  
21

22 *“I am trying my best to be very transparent about my work, how I produce my bags, and about myself*  
23 *as an entrepreneur and craftsman. This is to show that my products are the fruit of my passion and*  
24 *hard work, and that they are built with quality and durability in mind. I also want to show my*  
25 *products not as something to show off, like some people like to do with famous brands. I want my*  
26 *products to match the personality of their owners, and be there with them when they enjoy their life*  
27 *and daily adventures like a trustworthy companion. On a more general level, I also do my best to*  
28 *show that upcycling fashion can be pretty, funky, durable, and that it can be a source of inspiration*  
29 *for our everyday life.”<sup>2</sup>*  
30  
31  
32  
33  
34  
35  
36  
37  
38  
39  
40

41 Seen from the lens of discursive materiality, the focus of neo-craft work thus shifts from the nature  
42 and the properties of the final objects to the process of their formation. This means focusing on the  
43 playful and hybrid relationship between the corporeality of the artisan, the materiality of the raw  
44 materials and of the final goods, and the discursive practices informing that relationship as a whole  
45 (Gherardi, 2006). Furthermore, the entanglement between human and non-human elements has the  
46 potential to produce embodied affective resonance (Gherardi et al., 2019), but this is not an automatic  
47 outcome. Indeed, the material or discursive elements which are internalised in the bodies and the  
48 matters involved in the intra-action, can favour or at the opposite constraint the embodiment of  
49

1  
2  
3 affectivity. Thus, a process of discursive materiality takes place when the working act resulting from  
4 the intra-action of these elements enables the achievement of affective resonance. The discursive  
5 materiality of neo-craft work is pivotal in connecting it with the ideal of the ‘good work’ as theorised  
6 by Sennett or Ocejo. As a means to achieve affective resonance, neo-craft work sets out as a response  
7 to the ‘cruel optimism’ (Berlant, 2011) of creative work and a response to the general crisis of work,  
8 pursued by means of an adjustment in the way one’s discursive and material, manual and cultural  
9 dispositions are put at value.

15  
16  
17  
18  
19

20 Arguably, discursive materiality is not an exclusive feature of neo-craft work. Yet, neo-craft work  
21 represents a specific engagement in material and discursive practices: the engagement of the worker in  
22 a direct relationship with matter and its manipulation and alteration - i.e. the act of crafting - brings  
23 with itself a fundamental value. It allows what Bell and Vachhani (2020) define as the sensual,  
24 experiential and being-centred quality of craft. Indeed, building on the notion that global capitalism  
25 and consumerism depend on preventing humans to have sensory engagements with matter (Bennett,  
26 2010), Bell and Vachhani (2020, p. 695) argue that craft work ‘can be understood as a site where  
27 feeling and desire for crafted objects intersects with the bodies of others and is transformed into a  
28 source of affect’, producing interactions of desire. This embodied experiential pleasure is essential to  
29 the discursive materiality of neo-craft work. On the other hand, discursive practices embodied by the  
30 worker and expressed through the material engagement are equally fundamental in the process of  
31 discursive materiality of neo-craft work. Through the symbolic practice of marginal distinction, the  
32 worker operates a resignification of the craftsperson as a profession and, consequently, of their social  
33 status based on the cultural negotiation around the values of authenticity and the particular (Gasparin  
34 & Neyland, 2022).

52  
53

54 Also, both neo-craft work and work that has been as traditionally classified as craft might represent,  
55 potentially, processes of discursive materiality. Yet, what distinguishes them are the specific forms of  
56 engagement with the material and discursive practices in the process. In the latter, the discursive  
57 component embodied by the worker responds mainly to the ‘pure craft’ logic described by Kroezen et  
58  
59  
60

1  
2  
3 al. (2021), which emphasises mastery in the knowledge of the history and skills associated with the  
4 production techniques. The achievement of embodied affective resonance between the artisan and the  
5 matter in the working process derives from a manual manipulation consistent with this discursive  
6 mastery, i.e. a skillful working act capable of producing an object of high artistic quality and coherent  
7 with tradition. Compared to neo-craft work, the discursive engagement remains more reflexively  
8 oriented toward the manual manipulation of the matter. Also creative work might perpetuate the  
9 constraint of the workers' bodies. As material and discursive practices are not independent but are  
10 intra-acting components, the lack of engagement with material practices in 'classic' creative work also  
11 influences the kind of engagement with discursive practices this can enact, undermining its potential  
12 to the achievements in terms of status and good work involved in neo-craft work.

21  
22  
23  
24  
25

26 Comprehensively taken, work that has been as traditionally classified as craft and neo-craft work as  
27 here conceived might be seen as two pure ideal types at the ends of a broad spectrum (Fig. 1, below),  
28 rather than clear-cut categories. Neo-craft work may well engage in discursive practices based upon  
29 gaining mastery in the production process of an object with high artistic quality, altering their  
30 engagement with matter accordingly. Craft work as traditionally intended may as well engage in  
31 discursive practices of marginal distinction, achieving conspicuous production. Yet, in line with the  
32 focus of discursive materiality on the process, the critical assumption is that neo-craft work *may*  
33 engage in discursive practices distinctive of craft work as conventionally conceived and in the  
34 production of objects of exquisite artistic and design quality, but it *must* engage in the discursive  
35 practice of marginal distinction. The same, reversed, is valid for traditional craft work. Accordingly,  
36 jobs such as food truck operator, craft brewer, cocktail mixologist or the hairdressers described by  
37 Ocejo (2017) tend to align very closely with the neo-craft work ideal type. Others, such as potter or  
38 weaver, tend to align very closely to the traditional craft end of the spectrum. Still, these may also be  
39 considered to be neo-craft work: it is not the occupation that determines the closeness to a category,  
40 but the configuration of discursive materiality enacted through the work process. Ultimately, where a  
41 particular practitioner falls on the spectrum depends on how they practice their craft.

Fig. 1 - Discursive materiality - Spectrum of differentiation (including prototypical examples)

This becomes particularly evident in the example of the new generation of bootmakers in El Paso, Texas, described by Gibson (2016). These have embraced craft production for its relationship with the logics of creative work and authenticity but also have the will to acquire and bequeath the traditional production technique of cowboy boots from the previous generations of bootmakers. As seen earlier with Gabriele's example, also for Gibson's (p. 76) bootmakers 'in the new craft era workshops are run by people who view themselves as "creative" people with artisanal values, seeking to carve a living from a personal "passion" [...] The product's material shape and dimensions have provided a template for new and "retro" artistic expressions'. In other occasions, instead, it may even be the adoption of technological developments to enable the neo-craft nature of one's craft work, as in the case of Laura Quinn, a glassblower who integrated prototyping with 3D printing and social media work. In her auto-ethnographic reflections, she points out that her use of digital technology is to 'expand my audience's understanding of my identity, of the entire glass making process'. Put differently, for Laura her craft work is not only about mastering glass blowing, 'and I want them to know that' (Quinn, 2022).

## Conclusion

1  
2  
3 This article presented a theoretical conceptualisation of neo-craft work, with the goal of better  
4 understanding its growing significance. We have argued that neo-craft work should be seen among the  
5 'new forms of work' of the 21st century, as it represents an emergent form of post-industrial craft  
6 work whereby jobs that were previously considered low-status, or performed by the working class, are  
7 'resignified' into status-producing occupations through the integration of craft practices and values,  
8 and conferred new meaningfulness as the outcome of a specific form of *discursive materiality*, in  
9 which discursive and material practices become inextricably connected. We have shown how this  
10 finds roots in the cultural negotiations and the practices of marginal distinction that dominate  
11 hipster culture, taken here as the cultural milieu within which neo-craft work emerges, and outlined  
12 the notion of 'discursive materiality' as an interpretative framework to analyse and define neo-craft  
13 work in its intra-acting components. The discursive materiality framework also contributes to the  
14 recent but rich practice and affective turns in organisational studies, advancing a model that allows to  
15 interpret the working act, taking into full account human and non-human factors in organisations.  
16

28  
29  
30  
31  
32

33 It derives from this interpretation that neo-craft work should not be seen as another kind of craft as  
34 simple 'return to the past' (Bell et al., 2021), but rather one based upon what may be defined as a form  
35 of 'progressive nostalgia' (Gandini, 2020), which binds together the past and the future in a dialectical  
36 relationship, using the past as a future-oriented horizon that is not merely about preservation or  
37 conservation, but chiefly about innovation and change. The achievement of 'good work' is exemplary  
38 of this dynamic: after the demise of Fordism, this has been a long-standing promise of creative work  
39 (Hesmondhalgh & Baker, 2010; McRobbie, 2016), based on the fulfilment of autonomy and self-  
40 expression in contrast to the impoverishment of working conditions caused by industrialization  
41 (Boltanski and Chiapello, 2007). However, the reality of creative industries' working conditions,  
42 made of precariousness, alienation, exploitation and stressfulness (Hesmondalgh & Baker, 2010;  
43 Ross, 2009), undermined the credibility of this promise. Neo-craft work is taking over from creative  
44 work in this endeavour, renewing it on the basis of a resignification of manual work that looks back at  
45 the past with a future-oriented mindset. Traditional working-class occupations that involved  
46 (allegedly) low-skilled and manual work, as shown elaborating upon Ocejo (2017), are conferred an  
47  
48

1  
2  
3 ‘elite’ status on the basis of cultural negotiations around authenticity and ‘the particular’, which  
4 narration and detection confers value and meaning to these new craft practices. A return to a direct  
5 relationship with matter (and nature), the celebration of the embodied pleasure of manual labour and  
6 the idealisation of the allure of a meaningful work dedicated to ethical rather than purely economic  
7 goals (Gerosa, 2021; Ocejo, 2017), are the building blocks of this promise.  
8  
9  
10  
11  
12  
13  
14  
15

16 Yet, our effort remains an initial step: more work is required both theoretically and empirically to  
17 provide an in-depth understanding of neo-craft work. Future research will need to provide detailed  
18 accounts of work organisation, labour processes, job quality and conceptions of status across different  
19 neo-craft industries. This would also contribute to further delineating the actual boundary conditions  
20 of neo-craft work. Indeed, while neo-craft work challenges traditional notions of craft and ‘menial’  
21 manual labour through their symbolic upscaling, not all forms of manual work seem able to equally  
22 sustain discursive materiality based on marginal distinction. Emerging evidence suggests that objects  
23 for everyday experiential consumption (food and drinks, but also bikes and clothing, furniture and  
24 houseware, etc.) seem to be more prone to hold symbolic value for identity projects or  
25 (in)conspicuous consumption display thanks to the taste dealing of neo-craft workers (Gerosa,  
26 forthcoming). Other manual occupations (e.g., house cleaning, plumbing, construction work) might  
27 ultimately remain extraneous to such processes. Further research must thus work to refine the  
28 understanding of the boundaries of neo-craft work and analyse if and how it contributes to the  
29 creation of new hierarchies of symbolic inequality in manual work.  
30  
31  
32

53  
54  
55  
56  
57  
58  
59  
60

This also highlights the need to conduct research on the potentially critical aspects of neo-craft work,  
for both workers and society. Indeed, despite neo-craft work taking over the promise of achieving  
‘good work’ from creative work, the first empirical explorations suggest it is not without issues of  
social and gender inequality, and work precariousness (Delgaty & Wilson, 2023). Additionally, neo-  
craft businesses are increasingly under the spotlight as drivers of gentrification of urban space  
(Wallace, 2019; Schiermer, 2014) and of the cultural appropriation of popular consumer cultures  
(Gerosa, forthcoming). An in-depth critical exploration of these issues (and beyond) is essential to

1  
2  
3 avoid an academic glorification of neo-craft work, similar to what has occasionally happened in the  
4  
5 past with creative work.  
6  
7  
8

9  
10 Nonetheless, while acknowledging its inevitable limitations, we contend that this article serves the  
11  
12 key purpose of mapping the terrain on which debates over the contemporary status and significance of  
13  
14 craft work are taking place, as well as delineating an original framework for understanding the  
15  
16 specifics of ‘neo-craft’ work within that terrain. Seen from this perspective, neo-craft work emerges to  
17  
18 be more than just a fashionable trend. Paraphrasing Neff, Wissinger and Zukin (2012), it may be  
19  
20 argued that neo-craft work represents the new ‘cool job in a hot industry’, which significance is likely  
21  
22 to further increase in the post-pandemic scenario, where questions around the meaningfulness of work  
23  
24 have fully become mainstream, epitomised among other things by the emergent ‘great resignation’  
25  
26 debate (Thompson, 2021).  
27
