Inclusion criteria	Exclusion criteria
<i>Participants:</i> All adults with type 1 or type 2 diabetes mellitus (DM)	Children and adolescents (age below 18 years) Pregnant females Gestational diabetes mellitus Maturity onset diabetes of the young Latent autoimmune diabetes of adulthood No type 1 or type 2 DM
<i>Exposure:</i> Those with obstructive sleep apnea (OSA) or chronic intermittent hypoxemia (CIH)	Hypoxemia secondary to other respiratory disorders Chronic obstructive pulmonary disease Central sleep apnea Heart failure Asthma
Comparator: Adults without OSA or CIH	
Outcomes: Diabetic kidney disease (micro- and macro-albuminuria and chronic kidney disease assessed using glomerular filtration rate)	Renal impairment secondary to non-DM causes
Study designs: Cross sectional study Cohort study Case series	Non-human studies Single case reports Sample size < 10 participants Randomised controlled trials Intervention studies Experimental studies Systematic reviews/reviews Editorials Protocol papers Letters Guidelines/consensus statements
Language: All languages	

 Table 1: Eligibility criteria for systematic review

Search strategy:

Search	n terms for diabetic kidney disease
1.	Diabet\$.mp.
2.	Respiratory system/ or breathing disorder/ or snoring/ or hypoventilation/ or sleep/
	or polysomnography/ or sleep apnea syndrome/ or breathing/ or sleep disordered
	breathing/ or sleep disorder/
3.	Hypoxemia/ or respiratory function disorder/ or anoxia/ or hypoxia/
4.	Somnolence/ or apnea/ or apnea hypopnea index/ or hypopnea.mp.
5.	2 or 3 or 4

7.	Nephropathy.mp. or kidney disease/
8.	Albuminuria.mp. or proteinuria/ or albuminuria/
9.	\$albuminuria.mp.
10.	. Renal failure.mp.
11.	. Kidney function/
12.	. Diabetic nephropathy/ or nephropa\$.mp. or chronic kidney failure/
13.	. 7 or 8 or 9 or 10 or 11 or 12
14.	. 6 and 13

The free text used for OpenGrey database were "obstructive sleep apnea" and "obstructive sleep apnoea"

The search terms for Zetoc database included "obstructive sleep apnea and diabetes", "obstructive sleep apnoea and diabetes", "apnea and diabetes" and "apnoea and diabetes".

Table 3: Quality assessment form

Author	: Year: ver initials:	Study ID:		
Neview		Yes/No/ Unclear	Supporting evidence	
Select	ion bias		· ·	
1.	Does the study address an appropriate and clearly focused question?			
2.	Does the study recruit consecutive patients?			
	Are the cases and controls taken from comparable populations?			
4.	Are the exclusion criteria the same for both cases and controls?			
5.	Are the participants representative of the patient population?			
6.	If applicable, is the control group comparable to cases (consider suitability, recruitment and baseline characteristics)?			
	Is it clear that controls are not cases (in case control study)?			
Overa	II Judgement (Weak / Moderate /Strong)			
Respi	ratory measurement		·	
1.	Did the study use a suitable measurement for OSA? (PSG/oximetry measured in standard, valid and reliable way)			
2.	Is the scoring of the respiratory measures based on guidelines/consensus guidelines eg. AASM guidelines?			
3.	Is there a clear definition of OSA?			
	II Judgement (Weak / Moderate / Strong)			
Blindi	ng			
	Did the study blind the assessor performing the sleep analysis?			
Overa	II Judgement (Weak / Moderate / Strong)			
Study	methods			
1.	Are the attrition rates or missing data clearly documented?			
2.	Did the study document the reasons for drop outs or missing data?			
3.	Is this a retrospective or prospective design?			
Overa	II Judgement (Weak / Moderate / Strong)			
Analy	sis			
	Are all the outcomes reported?			
	Did the study adjust for confounding variables?			
	II Judgement (Weak / Moderate /Strong)			
Overa Strong	II judgement for the study (Weak, Moderate, g)			

Study	Definition of apnea/hypopnea or oxygen desaturation (OD)	OSA diagnosis	Min recording	DKD test	DKD diagnosis
Buyukaydin 2012 ¹	AASM criteria*	AHI≥5 events/hr	NA	24 hour urine albumin	Albuminuria ≥ 30mg/day
Furukawa 2013 ²	OD ≥3%	ODI≥5 events/hr	4 hours	Early morning urine ACR	Micro-albuminuria ≥3.4mg/mmol Macro-albuminuria ≥ 34.0 mg/mmol
Kosseifi 2010 ³ Laaban 2009 ⁴	NA Apnea = increased variation in suprasternal pressure with no airflow for ≥ 10 seconds; hypopnea = $\geq 50\%$ reduction in airflow with $\geq 4\%$ desaturation for ≥ 10 seconds	NA AHI≥5 events/hr	NA NA	NA 24 hour urine albumin	Micro-albuminuria Micro-albuminuria ≥ 30mg/day
Langrand 2014⁵ Leong 2014 ⁶	NA AASM criteria*	NA AHI≥5 events/hr	NA 4 hours	NA eGFR	NA eGFR <60min/ml/1.73m ² based on MDRD and CKD EPI equations
Schober 2011 ⁷	Apnea = 80% reduction in airflow \ge 10 seconds; hypopnea = 50-80% reduction in airflow with \ge 4% desaturations for \ge 10 seconds	AHI≥15 events/hr	NA	NA	NA
Storgaard 2014 ⁸	Apnea = 80% reduction in airflow \ge 10 seconds; hypopnea = 50-80% reduction in airflow with \ge 4% desaturations for \ge 10 seconds	AHI≥5 events/hr	4 hours	24 hour urine albumin	Micro-albuminuria 30-300 mg/day Macro-albuminuria > 300mg/day (2 out of 3 samples
Tahrani 2013 ⁹	AASM criteria*	AHI≥5 events/hr	4 hours	eGFR & urine ACR	MDRD eGFR <60min/ml/1.73m ² ACR >3.4 mg/mmol
Tanaka 2009 ¹⁰ Zhang 2014 ¹¹	OD ≥3% NA	ODI≥5 events/hr AHI≥5 events/hr	NA NA	Creatinine (mg/dl) NA	NA NA
Zhang 2015 ¹²	Apnea = 80% reduction in airflow ≥	AHI≥5 events/hr	NA	Urine ACR or medical	ACR >300mg

Table 4: Criteria used for the diagnosis of obstructive sleep apnea and diabetic kidney disease assessment as reported by the included studies

10 seconds; hypopnea = 50-80%reduction in airflow with $\ge 4\%$ desaturations for ≥ 10 seconds history

OD = oxygen desaturation, min = minimum, OSA = obstructive sleep apnea, hr = hour, NA = not available, DKD = diabetic kidney disease, eGFR = estimated glomerular filtration rate, MDRD = Modification of Diet in Renal Disease, CKD-EPI = Chronic Kidney Disease Epidemiology Collaboration, ACR = albumin-creatinine ratio.*AASM = American Academy of Sleep Medicine criteria: apnea = complete cessation of airflow for \geq 10 seconds; hypopnea = \geq 30% reduction in airflow \geq 4% drop in oxygen desaturation for \geq 10 seconds.

	Diabetic kidney disease
OSA	10 studies (n=2927) ^{1, 3-9, 11, 12}

 Table 5: Summary of the results for diabetic kidney disease

(+): reported significant association; (-): reported no significant associations; shaded cells indicate that no study reported data for the exposure-outcome combination. DR = diabetic retinopathy; OSA = obstructive sleep apnoea; AHI = apnoea-hypopnoea index; ODI = oxygen desaturation index; %TST<90 = percentage time spent under 90% oxygen saturation; O₂ = oxygen saturation, n = total number of participants

Meta-analysis

Three studies^{3, 5, 11} did not report on their results therefore a meta-analysis was carried out for seven studies^{1, 4, 6-9, 12} which reported unadjusted ORs on the association between OSA (defined using AHI) and DKD. The pooled estimates showed significant association (pooled OR 1.59, 95% CI: 1.16 to 2.18, I²=26.8%, Figure 1) using random effects analysis. The funnel plot of these studies^{1, 4, 6-9, 12} suggest an imbalance of small studies with positive results.

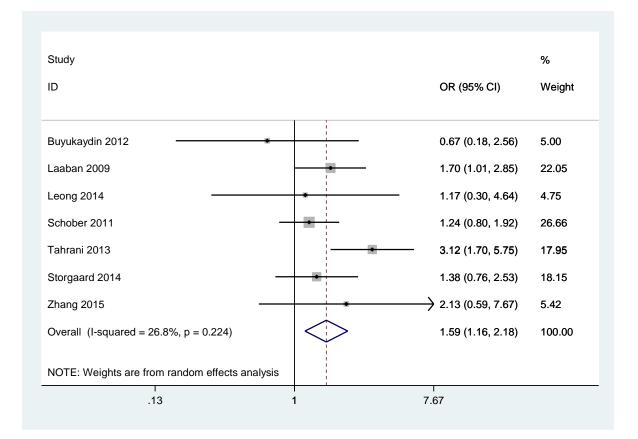

Figure 1: Forest plot of the association between obstuctive sleep apnea and diabetic kidney disease using results from studies which reported unadjusted odds ratios and 95% confidence intervals. Random effects analysis performed using Stata 13. Fixed effects model yielded similar results (pooled OR 1.60, 95% CI: 1.25 to 2.05, I^2 =26.8%)

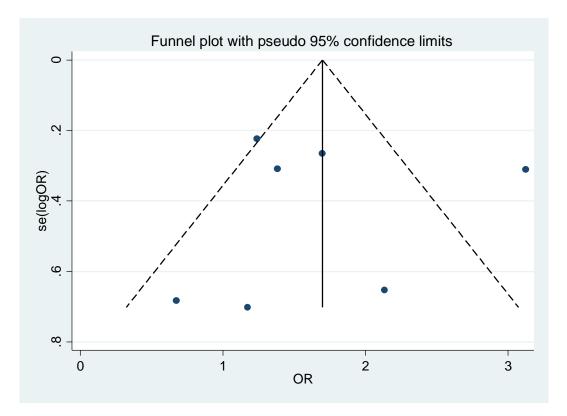

Figure 2: Funnel plot on studies which reported unadjusted odds ratios.

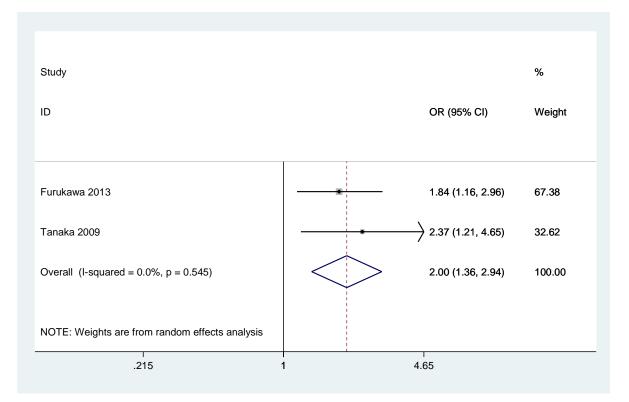

Figure 3: Forest plot of the association between obstuctive sleep apnea diagonsed using ODI and diabetic kidney disease using results from studies which reported adjusted odds ratios and 95% confidence intervals.
