Corrigendum

Corrigendum to 'Morning vaccination enhances antibody response over afternoon vaccination: A cluster-randomised trial' [Vaccine 34 (2016) 2679–2685]

Following our publication, we have engaged further methods of mixed-method cluster analysis and wish to present these to the reader. Analyses of the raw data (as in Fig. 2 of the paper) with baseline as a fixed factor reveal the following mean differences (95% CI) for H1N1 A-strain, 263.6 (−1.62 to 525.59) $p = .05$, H3N2 A-strain, 3.35 (−99.10 to 92.41) $p = .95$, and B-strain, 9.39 (−20.23 to 1.44) $p = .09$. Further, using log transformed data, the analogous statistics are: log mean difference (95% CI) for H1N1

A-strain, 0.53 (−1.00 to −0.07) $p = .04$, H3N2 A-strain, 0.20 (−0.08 to 0.48) $p = .16$, and B-strain, 0.23 (−0.49 to 0.03) $p = .08$. These reanalyses yield the same message as the original paper, but the effect for the B-strain now becomes non-significant/a trend.

The authors would like to apologise for any inconvenience caused.
